

Open the Burn app,
go into the Preferences

Select the video icon,
General tab,
Set the Region to NTSC

FYI:

(NTSC (National Television Systems Committee)
is for televisions in the United States,
PAL is for European televisions)

Make sure under the DVD tab,
the Audio codec is set to MP2,
this probably doesn't make
much difference, but some
older DVD players will only
play MP2 audio.
